Docket #
14972

Federal Aviation Administration
800 Independence Ave. S.W.
Washington, D.C. 20591

To whom it may concern,

I am writing this letter in regards to the proposed regulation of FAA-2003-149793, 14972
Construction or alteration in the vicinity of the private residence of the president of the
United States.

This regulation requires that a notice be filed with the FAA for the construction
or alteration of any object that exceeds 50 feet above ground level (AGL) and is within
the existing prohibited airspace surrounding the president's private residence, due to
national security.

To start, building owners are being asked to eliminate constructive office space in
regards to the extra national security for the president. This additional space could benefit
the community by providing more job opportunities and developmental growth. I found
there are several buildings well over 100 feet within the airspace surrounding the private
residence of the president. This leaves me to believe the development of the community
is not a priority and provides little evidence that supports how this regulation would
protect the president.

14972
In addition, the proposed regulation FAA-2003-149793 expires at the end of the
presidents' term. If this regulation goes through what will be next, would we have to
submit a notice to the DMV in order to drive within 50 feet of the president's residence
or yet, will we not be able to walk within 50 feet of the president without filing a
background check with the F.B.I.

In summary I agree with some of the regulations used to protect our president.
However, I do not believe this is one of them. Please reconsider this regulation.

Sincerely,

Tomias A Moore
